

AD BLUE POWER

DESCRIPTION

WHAT IS AdBlue? AdBlue is a high quality urea solution that is easy to use.

Treblex AdBlue Power is a high quality Urea Solution 32.5% that is used with the Selective Catalytic Reduction system (SCR) to reduce emissions of oxides of nitrogen from the exhaust of diesel vehicles. AdBlue is a solution of high-purity urea in de-mineralised water that is clear, non-toxic and safe to handle. It is not explosive, non-flammable nor harmful to the environment. AdBlue is classified under the minimum risk category of transportable fluids. It is not a fuel, nor a fuel additive and needs to be used in a dedicated tank in your heavy-duty vehicle. It is replenished in a similar way to refuelling diesel. Should you spill AdBlue on your hands, simply wash it off with water.

Sizes available: 10L, 20L, 200L, 1000L

FEATURES

When AdBlue Power is injected directly into the exhaust system to combine with exhaust gases in the catalytic converter, all harmful nitrogen oxides (NOx) are immediately reduced into harmless nitrogen and water. This results in increased power and torque.

Meets ISO 22241 specifications.

APPLICATIONS

How much AdBlue do I need?

AdBlue should be used as per vehicles manufacturer's requirements.

Example: Average consumption of AdBlue is generally 5% of diesel use, so you will need to use much less of AdBlue than you do diesel. You will use about 5 Litres of AdBlue to every 100 Litres of diesel.

SAFETY

Keep out of reach of children. Read Material Safety Data Sheet (SDS or MSDS) before use.
