

# RUSTCURE

## DESCRIPTION

**TREBLEX RUSTCURE** is a water-based rust-converting solution for use on corroded ferrous surfaces as a pre-treatment prior to painting.

Sizes available: 20L, 200L, 1000L

## FEATURES

TREBLEX

- Contains deep penetrating solvents.
- Forms a strong stable matrix with rust.
- Suitable for over-coating with most conventional finishes.
- May be used on any rusted surface.

## APPLICATIONS

TREBLEX Rustcure has applications for marine, construction, mining and automotive industries as well as many uses around the home. Approved by the Department of Primary Industry and Energy for use in export registered meat establishments.

## DIRECTIONS

Rustcure is applied by brush or spray. For treatments of heavy rust, or in hot dry conditions, the surface may be re-treated after about one hour. Depending on the degree of rusting and on ambient conditions the surface may be repainted after about 6-24 hours of curing and after excess product has been washed off and the surface allowed to dry. All loose or flaky rust and paint must be removed using a wire brush, needle gun or sand blaster to obtain a class 1 preparation. If used in food processing areas, rinsing should be with potable water.

## SAFETY

Keep out of reach of children. Read Material Safety Data Sheet before use.
